**MOTIVATION** *I am passionate about **solving business problems** using Data Science & Machine Learning. I systematically & creatively use my skillset to **add tangible value** to the team, the business, and the end-user. I am constantly learning, and always looking to improve.*

**SKILLS & TOOLS**

**Programming:** SQL, Python (Base, Pandas, Numpy, Matplotlib, Scikit-Learn, Keras), R **Tools:** Excel, Tableau, Github, AWS (S3, Lambda, IAM, EC2, SageMaker, RDS, DynamoDB, Glue)

**Math:** Linear Algebra, Statistics (Hypothesis Testing, AB Testing, Central Limit Theorem, Distributions)

**Machine Learning:** Linear Regression, Logistic Regression, Decision Trees, Random Forest, KNN, k-means, PCA, Association Rule Learning, Causal Impact Analysis, Neural Networks

**EXPERIENCE** **Data Analyst Charlotte Mecklenburg School District**

JUNE 2023- PRESENT CHARLOTTE, NC

- **Programmed** an algorithm that streamlined **data collection**, reducing the time spent by 25% and enhancing data accuracy by 30%.
- Spearheaded a project to digitize the data processing department, increasing efficiency by 50% within 8 months.
- **Developed a predictive model leading** to a 20% reduction in customer attrition rate.
- Delivered insights from extensive data analysis, **aiding executive decision-making** and contributing to an annual increase in revenue by 10%.
- **Managed and mentored a team of junior data analysts**, resulting in a 50% increase in productivity.

**Data Coordinator EXP Realty**

AUGUST 2020 - MAY 2023 CHARLOTTE, NC

- **Converted raw data into insightful reports**, leading to two policy updates that boosted efficiency by 30%.
- **Implemented a new data classification system** significantly improving the speed of information retrieval by 20%.
- **Enhanced predictive modeling technique** resulting in a 5% increase in forecast accuracy.
- Automated data extraction, and created a dynamic weekly report that helped senior leadership **understand and investigate trends over time**, and **diagnose potential issues**.
- **To aid the Marketing team's customer contract strategy**, I built an automated hypothesis testing tool that analyzed marketing campaign results. This **reduced the time for campaign evaluation** by 15% and facilitated several other collaborations between Marketing & Data Science in the company.

## EXPERIENCE (CON'T)

### Data Analyst Chester County School District

AUGUST 2016 - JUNE 2020 CHESTER, SC

- Programmed an algorithm that streamlined [data collection](#), reducing the time spent by 25% and enhancing data accuracy by 40%.
- Spearheaded a project to digitize the data processing department, increasing efficiency by 45% within 8 months.
- Developed a [predictive model leading](#) to a 20% reduction in customer attrition rate.
- Delivered insights from extensive data analysis, [aiding executive decision-making](#) and contributing to an annual increase in revenue by 10%.
- Managed and mentored a team of junior data analysts, resulting in a 50% increase in productivity.

## PROJECTS

### Grocery Delivery Optimization

- Created & applied a [Genetic Algorithm in Python](#) to search out a near-optimal route across 10 addresses. This led to estimated [savings of up to 50%](#) in both delivery time and fuel consumption over a route based upon transaction order alone. This approach could be utilised across many industries as a way to find more optimal solutions.

## PROJECTS (CON'T)

### "You Are What You Eat" Customer Segmentation

- Used [k-means clustering](#) on grocery transaction data to split out customers into distinct "shopper types" that could be used to better understand customers over time, and to more accurately target customers with relevant content & promotions.

## EDUCATION

### BCA/BSc (Psychology)

2006 - 2010 - Alaska Pacific University, AK

### BCA/BSc (Education)

2016 - 2017 - University of North Carolina, Charlotte, NC

## COURSES & CERTS

### Data Science Professional Certification (Data Science Infinity)

[Actionable Learnings](#): Extracting & manipulating data using SQL. Application of statistical concepts such as hypothesis tests for measuring the effect of AB Tests. Utilising Github for version control, and collaboration. Using Python for data analysis, manipulation & visualisation. Applying data preparation steps for ML including missing values, categorical variable encoding, outliers, feature scaling, feature selection & model validation. Applying Machine Learning algorithms for regression, classification, clustering, association rule learning, and causal impact analysis for measuring the impact of an event over time. Machine Learning pipelines to streamline the ML pre-processing & modelling phase. Deployment of a ML pipeline onto a live website using Streamlit. Using Tableau to create powerful Data Visualizations. Turning business problems into Data Science solutions.
